

Make the Connections

You'll need to access the back of the SiriusXM-Ready headunit so you can plug the SXV300 Vehicle Tuner into it. This may require you to remove the headunit from the dashboard. If you are uncomfortable with this step, consult a professional installer.

Be sure to turn OFF the SiriusXM-Ready headunit before connecting the SXV300 Vehicle Tuner. Locate the SiriusXM connector on the headunit and connect the SXV300. The headunit may have a panel mount type connector, or it may have a pigtail type connector.
